

## **PRO-1000**DS<sup>™</sup> Traffic Safety Radar

# The affordable PRO-1000DS is downsized -a kustom fit for any size patrol vehicle.

What's in a name? For Kustom's PRO-1000DS the name says it all: DS for downsized. Current technology has allowed us to make the PRO-1000DS, one of the smallest radar units available.

#### **Unbeatable Tracking History**

The Target Lock display allows you to lock a target speed and continue to monitor the target speed in the active Target Speed display. You'll see if the target slows down or speeds up and you'll hear the Doppler audio reinforcement. *Indisputable tracking history and target identification!* 

### Exclusive QuikTrak<sup>TM</sup> Feature

QuikTrak<sup>™</sup>, a Kustom Signals exclusive, is a convenient shortcut, performing two functions at once. By pressing one button, the unit comes out of Hold mode and immediately monitors speeds. Releasing the button locks a target speed and puts the unit back into Hold.

### Videotape Traffic Violations

Increase conviction rates and establish "probable cause" by choosing the optional feature of interfacing the PRO-1000DS with Kustom's in-car video systems. You'll have video-taped evidence of the speed violation as it occurs, with the actual speeds superimposed onto the footage. Unbeatable!

#### Kustom-Built to Last

Like all Kustom radar, the PRO-1000DS meets or exceeds all federal specifications. We use only the best componentry available; that means years of accurate, trouble-free performance.

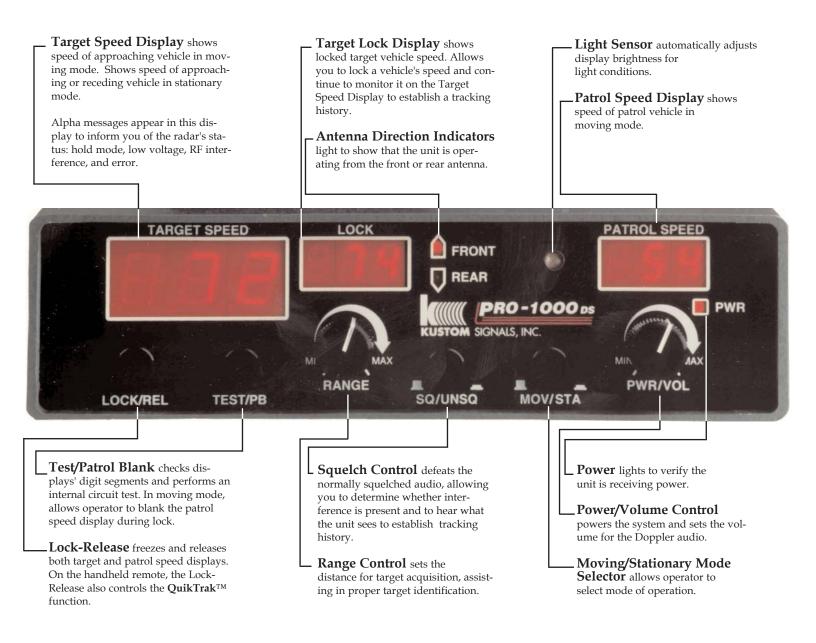

**PRO-1000**DS. The convenience you want and the reliability you expect in your Kustom radar.

For more information, call 1-800-4KUSTOM (458-7866) www.kustomsignals.com

## **Radar System Functions**

The **Remote Control** features **RF Hold** to defeat radar detectors, **Lock-Release** to freeze the target speed in the lock display window, and **front/rear antenna** selection. **QuikTrak**<sup>™</sup> is operated by depressing and holding the Lock-Release button.

## **PRO-1000**DS<sup>™</sup> **Radar System Specifications**

System – General		Antenna	
Туре:	Two-Piece Moving/Stationary	Operating Frequency:	24.15 GHz (k-band) <u>+</u> 100 MHz.
	True Doppler Radar.	Type:	Circular polarized, conical horn.
Measurement:	Available in miles or kilometers	Microwave Source:	Gunn-Effect Diode.
	per hour.	Beam Width:	13° +1°.
Operating Environment:	-22°F to +140°F (-30°C to+60°C);	Side Lobes:	25 dB below main beam.
	90% relative humidity at +99°F	Receiver:	Low-noise Schottky Barrier Diode (100 mW
	(+37°C), non-condensing.		rating).
Power Requirements:	10.8 to 16.5 VDC, negative	Power Output:	15 mW typ., 50 mW max.
	ground.	Power Density:	<5 mW/cm <sup>2</sup> (measured 5 cm from antenna
	13.6 VDC nominal, 1.0A max.		face).
Reverse Polarity	No damage will result, due to	Weather Resistance:	For mounting inside or outside patrol vehicle.
Protection:	reversal of power supply.	Dimensions:	3.5"H x 3.6"W x 3.75"L, 1.88 lbs.
			(8.89 x 9.14 x 9.53 cm, 0.85 kg)

#### Display/Counting Unit
